

Healthcare Policy Sales Agent

Link: <https://app.wordware.ai/explore/apps/c29d476d-2162-4101-bb12-4f090694f232>

The screenshot shows the Wordware application interface. On the left is a sidebar with navigation options: Explore, Featured, Wordware in the Wild, and a list of categories including Autonomous Agents, Marketing & Sales, Research & Education, Finance & Legal, Fun & Lifestyle, HR & Operations, and Tools & Integrations. The main area is titled 'HealthCare Agent > Run'. It contains a 'Run App' section with input fields for 'USER_QUERY' (i need health insurance plan), 'AGE' (22), 'FAMILY_TYPE' (Individual), 'FAMILY_NO' (2), and 'SPEC_REQ' (null). A green 'Running...' button is at the bottom of this section. To the right is the 'Output' section, which displays the generated response from the 'new_structured_generation' model (gemin-2.5-pro). The response is a detailed recommendation for a health insurance plan based on the user's input.

If the user's query doesn't relate to policy selection, respond with:
"I'm only able to assist with healthcare insurance policy recommendations. Please ask a relevant question."

Ensure the tone remains courteous, informative, and professional, with clear and actionable guidance based on user inputs. Your task is to recommend suitable healthcare insurance policies in concise words as an answer to the i need health insurance plan using the 22, Individual, 2, null. Also, return all the details provided by the user (age, family type, number of dependents, and special requirements) in your response.

If you have any further queries, please let me know. Otherwise, reply "good"

new_structured_generation gemini-2.5-pro

response: "Thank you for sharing your details:\n* Age: 22\n* Coverage Type: Individual\n* Number of Dependents: 2\n* Special Requirements: None specified\n\nYou've indicated 'Individual' coverage but also listed 2 dependents. An 'Individual' plan is designed for one person. If you intend to cover yourself and your 2 dependents, a family plan would be necessary.\n\nBased on your information:\n1. If you require coverage for yourself and 2 dependents: The **FamilySecure Plan** is recommended. It offers comprehensive benefits suitable for families.\n2. If you require coverage only for yourself (age 22): The **StarterSecure Plan** is a suitable choice. It provides essential health coverage tailored for young adults.\n\nPlease clarify if coverage for dependents is needed, and I can further assist."

If you have any further queries, please let me know. Otherwise, reply "good"

This screenshot shows the same Wordware application interface as the first one, but with a follow-up interaction. The 'USER_QUERY' field now contains a follow-up question. The 'Output' section shows the response from the 'new_structured_generation' model, which provides further guidance and recommends specific plans based on the user's follow-up query.

It provides essential health coverage tailored for young adults.\n\nPlease clarify if coverage for dependents is needed, and I can further assist." { "response": "Is there any other plan available for family" }

new_structured_generation gemini-2.5-pro

response_query: "Thank you for your follow-up question. You are looking for family plan options for yourself (age 22) and 2 dependents, with no specific special requirements mentioned.\n\nAs previously discussed, the **FamilySecure Plan** is a strong candidate, offering comprehensive benefits suitable for families.\n\nAnother family plan option is the **WellnessPlus Plan**. This plan also provides coverage for families and has a particular focus on preventive care and wellness programs. If these aspects are a priority for your family, the WellnessPlus Plan could be a suitable alternative.\n\nBoth plans can cover you and your two dependents. The choice between them might depend on whether you prefer broad comprehensive coverage (FamilySecure) or a plan with enhanced wellness benefits (WellnessPlus)."

Suggestions for Improvement

1. Advanced Multi-Modal Policy Comparison & Visualization

Current Limitation:

The agent currently provides only text-based recommendations without any visual aids or structured comparison between policies.

Enhancement Proposals:

- Add **interactive comparison tables** displaying side-by-side policy features like:
 - Premiums
 - Deductibles

- Coverage limits
 - Network size
- Implement **cost calculators** to estimate yearly expenses based on the user's health profile and expected usage.
- Generate **visual charts** to highlight:
 - Coverage gaps
 - Benefit summaries
 - Cost projections
- Introduce **filtering options** for:
 - Price range
 - Coverage type
 - Provider network availability

Expected Impact:

Enables users to make informed decisions quickly and intuitively through visuals rather than parsing long blocks of text.

2. Intelligent Contextual Memory & Progressive Profiling

Current Limitation:

The app maintains only a basic session memory, lacking the ability to build ongoing, personalized health profiles or adapt based on past interactions.

Enhancement Proposals:

- Develop **persistent user profiles** that track:
 - Health history
 - Policy preferences

- Life changes (e.g., age milestones, dependents)
- Add **context-aware follow-up questions**, e.g.,
“You mentioned diabetes — would you prefer plans with specialist coverage?”
- Use **dynamic questionnaires** that adapt based on:
 - User age
 - Family status
 - Specific concerns or conditions
- Implement **preference learning**, where the system improves recommendations by observing user interactions and interests.

Expected Impact:

Delivers highly personalized and evolving suggestions, reduces redundant data entry, and enhances recommendation accuracy.

3. Real-Time Policy Data Integration & Proactive Notifications

Current Limitation:

The system relies on static PDF data and lacks integration with real-time insurance updates or external data sources.

Enhancement Proposals:

- Integrate **real-time APIs** from insurance providers to reflect:
 - Current pricing
 - Policy availability
 - Updated terms
- Implement a **notification system** for:
 - New policy offerings
 - Enrollment deadlines

- Personalized alerts based on profile matches
- Use **external data** to inform users on:
 - Provider ratings
 - Claim processing times
 - Customer satisfaction
- Add **seasonal reminders** for:
 - Open enrollment
 - Major life events (e.g., marriage, childbirth, employment changes)
- Enable **regulatory update tracking** to notify users of healthcare law changes affecting their coverage.

Expected Impact:

Ensures users receive timely, relevant, and up-to-date information, helping them avoid missed opportunities and stay compliant with regulations.
