3. Get personalized recommendations based on your profile

4. Continue the conversation or start a new session

Sample Questions

- "What's the best policy for a family of 4?"
- "I need coverage for senior health - what do you recommend?"
- "What are the most affordable options for individuals?"
- "Which policy covers dental care?"

Policy Recommendations

Based on your age (22), family type (individual), one dependent, and no special needs, the **Family Health Plus Plan** is the most suitable option. The Senior Health Security Plan is not appropriate as it's designed for individuals 55 and older. The Family Health Plus Plan covers your needs, including your dependent, with comprehensive benefits at a \$500 monthly premium. You may also wish to consider the Dental & Vision Add-On or International Travel Medical Insurance depending on your needs and budget.

Policy Recommendations

The only other plan offered is the Senior Health Security Plan, but it's unsuitable for you due to your age. The Family Health Plus Plan is your only option from the provided plans. You could add the Dental & Vision Add-On or International Travel Medical Insurance to the Family Health Plus Plan for supplemental coverage.

Suggestions for Improvement:

1. Advanced Multi-Modal Policy Comparison & Visualization

Current Limitation: The agent provides text-based recommendations without visual comparison tools or structured policy breakdowns.

Enhancement:

- Add interactive comparison tables showing side-by-side policy features (premiums, deductibles, coverage limits, networks)
- Implement cost calculators that project annual expenses based on user's health profile and usage patterns
- Create visual charts showing coverage gaps, benefit summaries, and cost projections
- Add filtering capabilities (by price range, coverage type, provider network)

Impact: Users could make more informed decisions with clear visual comparisons rather than parsing through text descriptions.

2. Intelligent Contextual Memory & Progressive Profiling

Current Limitation: The application only maintains basic chat history and doesn't learn from user preferences or build a comprehensive health profile over time.

Enhancement:

- Implement persistent user profiles that remember health conditions, previous policy preferences, and life changes
- Add contextual follow-up questions based on user responses (e.g., "You mentioned diabetes - do you need specialist coverage?")
- Create dynamic questionnaires that adapt based on user age, family status, and stated concerns
- Build preference learning that improves recommendations based on what users show interest in or dismiss

Impact: More personalized and accurate recommendations that evolve with the user's needs, reducing repetitive data entry and improving relevance.

3. Real-Time Policy Data Integration & Proactive Notifications

Current Limitation: The system relies on static PDF content and cannot access current policy pricing, availability, or regulatory changes.

Enhancement:

- Integrate APIs from insurance providers for real-time pricing and availability
- Add notification system for policy changes, enrollment deadlines, or new options that match user profiles
- Implement external data sources for provider ratings, claim processing times, and customer satisfaction scores
- Create seasonal reminders for open enrollment periods and life event triggers (marriage, birth, job change)
- Add regulatory update tracking to inform users of healthcare law changes affecting their coverage
